## Installation

Install the Calumen program by following the steps below:

1. Start Windows.

2. Unzip the file containing the installation kit into a file you previously created on your hard disk.

3. Open this folder which contains the following files.

Setup Calumen II.msi
Package Windows Installer
4 304 Ko

setup.exe
Setup

4. Click on the **setup.exe** icon. The installation program will first check that your PC has all the components **Calumen** requires, and will then install **Calumen**.
If some components are missing, the program will suggest installing them. In particular, the presence of a version of Framework (set of programs included in Windows) useable by Calumen is essential. If it is required, the installation of the correct version of Framework (2.0 or later) can take more than 20 minutes and requires considerable disk space.

5. Depending on your PC's level of security, administration rights may be required before continuing with the program's installation.

6. Wait for the program to install automatically.

7. We recommend installing the program in the suggested directory (C:\Program Files\Saint-Gobain Glass).

8. Follow the instructions on the screen. We recommend choosing the options suggested by the installation program to avoid any problems at a later stage.

9. Once installation is complete, open **Calumen** from the Windows Start menu.

Additional information

! If you work in a secure environment, you must have administrator rights to install **Calumen**. If necessary, check with your IT department.

! If the **Calumen** program has already been installed, **setup.exe** will first uninstall the existing version. You will have to restart Setup.exe to install the new version of **Calumen**.

! If an identical or later version is already installed, the following error message will be displayed on your screen.

You will then have to uninstall this version using the appropriate Windows tool, and then restart the installation procedure.
