GLASS POSSIBLY IN OUR THE BEST ENVIRONMENT GLASS INDUSTRY

Ramos Industria del Vidrio is a company dedicated to transforming glass for supplying sectors related to façade cladding and interior decoration. Since its birth in 1984, it has been striving to offer quality products and an efficient and rapid service, thus achieving full customer satisfaction.

The company is in permanent evolution, adapting continuously to the new needs of the market and constantly improving and incorporating new technologies, making us leaders in the sector.

SGG CLIMALIT IGU

The main activity of the group is the manufacture of SGG CLIMALIT IGU applied to façade cladding with all types of selective glass, achieving safety, solar control and very low heat transfer coefficient, enabling compliance with the new Spanish technical building code (C.T.E.).

In our SGG SECURIT tempering centre we have the most modern resources on the market to manufacture tempered glass in a convention oven that can temper thicknesses from 2.8 to 19 mm. With this technology we achieve enhanced planimetry in selective glass compared to other manufacturers of conventional tempered glass by radiation.

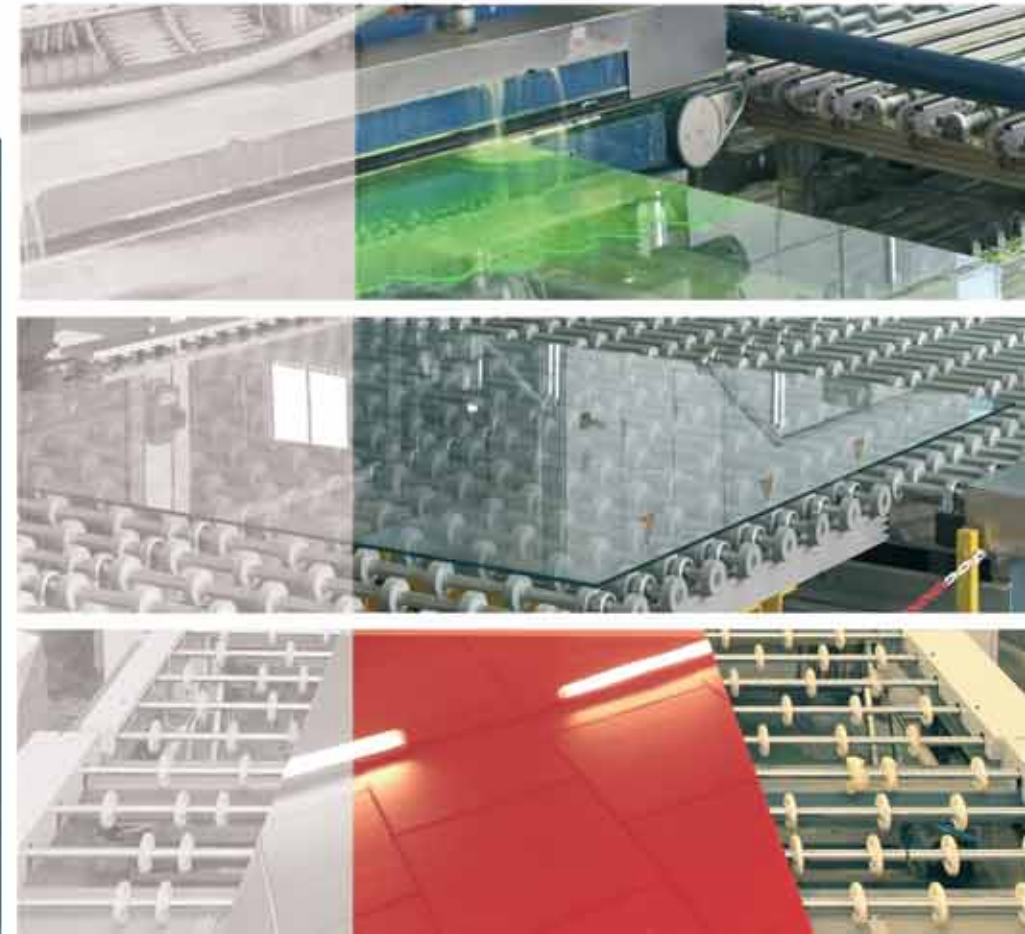

QUALITY

In Ramos Industria del Vidrio we are committed to quality and guarantee of our products, for which we have state of the art technology and an experienced workforce (We have a company registration certificate for each of the entities in the group, issued by AENOR and based on UNE-EN-ISO 9001:2000 standards and well as having CE marking for all our products).

CUSTOMER SERVICES

We have a specialized technical department to offer solutions to all the customers' needs.

INTELLIGENT PERFORMANCE

6

Ramos
INDUSTRIA DEL VIDRIO

As well as being licensees of the SGG CLIMALIT and SGG SECURIT brands, we commercialize all the products on the market.

- Double glazing
- Laminated glass
- Tempered glass
- Fire resistant glass
- Glass for interiors

Our installations in Leganés (Madrid) are magnificently located, surrounded by an excellent road network to facilitate localization and improve our distribution systems.

UNQUESTIONABLE LEADERS
